

2020 CATALOGUE

PRIME-LITE

Prime-Lite is a leading manufacturer and distributor of multi-functional worklights and flashlights to the automotive, hardware, electrical, HVAC, sporting goods and farm & fleet industries. We continuously strive to set the standards of excellence when it comes to portable lighting in these sectors.

We pride ourselves on our emphasis and dedication to constantly innovating and improving our products to ensure the highest quality and maximum function at a competitive price in the market. Our dedication to maintaining these values has elevated the Prime-Lite brand of products from humble beginnings to the forefront of the industry.

Prime-Lite serves as a leading symbol of design and engineering excellence and we are committed to providing exemplary service and quality as we progress forward.

OUR BRAND SPIRIT

INNOVATION & DIVERSITY

The strength of our brand lies in the quality and diversity of our line, the innovative features our products offer (multiple lighting modes, magnets, foldable hooks and pivoting/rotating casings) for use in various applications, and our bold approach towards exploring and developing new technology, such as Surface-Mounted Diodes (SMD) and Chip-On-Board (COB) light sources.

MERCHANDISING

The quality of any product would go unnoticed without the kind of presentation that invites the customer to try it before they buy it. We are one of the pioneers of digitally printed POP shelf displays for displaying work lights in retail stores. The advantage of these "Try & Buy" displays have over conventional plastic packaging is that customers can pick up any unit and fully experience all of its features. The use of POP displays has shown to increase the rate of sale by as much as 64%, and we have used this technique effectively to promote our brand and boost sales.

BRAND IDENTITY

The performance and intelligent branding of our products, combined with our competitive pricing structure, has propelled Prime-Lite to the status of one of the top manufacturers of professional work lights in Canada. Today, our signature green & black is more visible than ever and equally recognized by tradespeople and regular consumers.

PRIMARY / SECONDARY LIGHT SOURCES

PRIMARY

SECONDARY

3W
COB5
LED

Some of our models have multiple light sources. Primary refers to the major light source, usually a worklight, and Secondary refers to the minor light source, usually a flashlight.

LED

Standard models with an array of LEDs forming the light source. The number indicates the number of LEDs in the array.

SMD

An alternative to standard LEDs, Surface-Mounted Diode technology involves fusing an LED to a printed circuit board. It provides more Lumen output than traditional LED arrays and a wider illumination angle. The number indicates the number of SMDs in the array.

COB

A Chip-On-Board or COB light source is a lighting panel created by bonding multiple LEDs on a substrate. They take up less space so more LEDs can be packed in the same space, resulting in increased Lumen output per square inch. They require fewer components, greatly reducing failure rate and dissipated heat. Less heat loss also makes them more efficient than traditional LED light sources. Most of our COB models indicate the power rating in Watts.

SECONDARY

PRIMARY

LUMENS

LUMENS

140

Indicates the intensity of the light source.

RUNTIME

RUNTIME

6 - 7

Indicates the runtime in hours of continuous use.

BATTERIES

All our light models come with batteries or charging equipment included. The most commonly used battery types in our products are standard AAA and AA batteries. Some smaller and larger models use button type LR or CR batteries and D batteries respectively.

AA

BATTERY

3
AA

Indicates the number of batteries required and battery type.

AAA

BATTERY

2000
MAH

Indicates a rechargeable battery with 2,000 mAh capacity. For rechargeable products, we use Lithium ion or Lithium polymer batteries.

D

LR44

CR2032

CR927
